

GCC Extend LaserPro laser tube warranty

Dear Esteemed partners

Thanks to the good quality control brought into GCC's manufacture system for the past couple of years and lower defective rate on power board and laser tube shown in our service database, GCC has successfully reached higher level of product design and manufacturing capability. We are also delighted to share the fruit of such success to our customers by extending the warranty of LaserPro's laser source. Therefore, I am honored to announce the great news as:

"Starting from Sept. 2012, LaserPro extends the warranty of its metal CO2 laser tube (Synrad, Coherent) that installed in GCC's LaserPro machine from 15 months to 24 months at no cost." As usual, the warranty period starts from the delivery date.

This new warranty policy will cover CO2 laser sources from Venus, C180, Mercury, Spirit, Spirit LS, Spirit GLS, to Gaia as well as Stellar Mark CO2 version.

In addition, Stellar Mark CO2 and I series will match to the warranty period of 2 years for both machine and laser source.(including scan head but not scan lens).

We believe this unprecedented offer will enhance not only the image of GCC as good quality product manufacturer but also lift the value of LaserPro as highest performance/price ratio product in the market. And it should be the best promotion tool to win the competition. We hope the same warranty policy will be applied and announce to your customer shortly.

Best Regards,

Bill Jen
